SUMMARY

Backend engineer with seven years building order, payment and logistics services in TypeScript and Java. I design APIs that stay fast at peak traffic and keep money flows correct with idempotent, tested code.

SKILLS

Languages

TypeScript · Java · Python · SQL · Bash

Data & cloud

PostgreSQL · MySQL · AWS Lambda

Tooling

Git · GitHub · GitLab · npm · Visual Studio Code

Frontend & team

React · Tailwind CSS · Figma · Notion · Slack

EXPERIENCE

Sagara Commerce — Jakarta
Senior Backend Engineer — Jan 2024 – Present

- Lead 5 engineers on the checkout and payment services, which handle 1.8 million orders a day at peak.
- Split the order monolith into 6 Node.js services on Kafka; p99 latency fell from 1.2 s to 280 ms.
- Introduced idempotency keys and a reconciliation job; duplicate charges dropped to zero and refunds by 37%.

Sagara Commerce — Jakarta
Backend Engineer — Feb 2021 – Dec 2023

- Built the Java promotions engine: 12,000 campaigns a month and flash sales for 300,000 concurrent users.
- Moved nightly reports to AWS Lambda and cut their infrastructure cost by 62%.

Lintas Kargo — Jakarta
Software Engineer — Aug 2019 – Jan 2021

- Wrote the shipment-tracking API in TypeScript used by 40 partner couriers; kept uptime at 99.95%.

PROJECTS

antre — 2022 - Present
PostgreSQL-backed job queue for TypeScript with retries and scheduling; 1,400 stars, 30 contributors.
github.com/fajarnugraha/antre

rupiah-ts — 2020
Exact money arithmetic and Rupiah formatting; 9,000 weekly downloads on npm.

EDUCATION

Universitas Indonesia
Computer Science
Bachelor of Computer Science • GPA 3.62
Depok • 2015 – 2019
