Summary

Engineering manager and former backend engineer with eleven years in fintech, now leading the teams behind a payment gateway that settles IDR 18 trillion a month. I care about money moving correctly the first time: idempotent APIs, a humane on-call and audits passed without drama. I still review designs and write code when the team needs a hand.

Experience

Bayarloka — Jakarta
Engineering Manager, Payments Core — Feb 2023 – Present

- Lead 18 engineers in three squads owning card acquiring, QRIS and merchant settlement; hired eight and promoted three.
- Raised payment API availability from 99.90% to 99.98% and cut monthly incident minutes by 70%.
- Took 40 services through PCI DSS 4.0 certification with zero major findings.

Bayarloka — Jakarta
Senior Backend Engineer — Mar 2020 – Jan 2023

- Designed a double-entry ledger in Go and PostgreSQL for 2 million transactions a day; reconciliation fell from three days to four hours.
- Moved settlement batch jobs to Kafka streams; merchants now receive funds the same day instead of T+2.

Sembada Finance — Jakarta
Backend Engineer — Aug 2015 – Feb 2020

- Built the loan disbursement and repayment APIs in Java for 600,000 borrowers.
- Added a fraud rules engine that blocked IDR 12 billion of suspicious applications in its first year.

Education

Telkom University — Bachelor of Engineering · GPA 3.55
Informatics — Bandung · 2011 – 2015
